

**A door's a door,  
right? No, a fire  
door is an  
engineered  
safety device.**

**Fire doors are a  
crucial part of the  
passive fire  
protection of  
every  
commercial,  
public and  
multiple  
occupancy  
building. They  
save lives and  
property**

# FIRE DOOR SAFETY WEEK

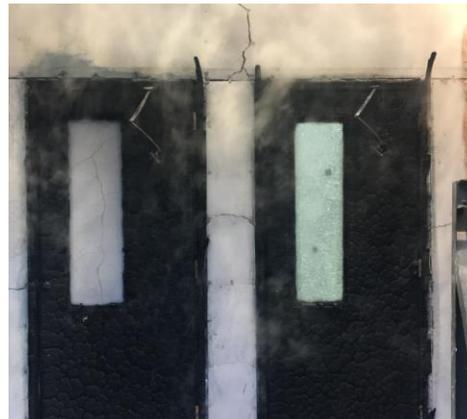

## About Fire Door Safety Week

Fire doors are often the first line of defense in a fire and their correct specification, maintenance and management can be the difference between life and death for building occupants.

However, they remain a significant area of neglect, often the first thing to be downgraded on a specification and mismanaged throughout their service life, propped open, damaged and badly maintained.

## 5 Step Check List

- 1) **Check for certification-** is there a label or plug on top or on the side?
- 2) **Check the gaps-** Gaps around the top and sides should be 3-4mm. Bottom gaps may be up to 8mm
- 3) **Check the seals-** Are there any intumescent seals in the door and frame?
- 4) **Check the hinges-** Are the hinges firmly fixed and fire rated (usually will show a BSEN code and grade 13 or more)
- 5) **Check the door closes properly-** Does the door firmly latch and close fully

## What YFS offer to help with fire safety week

- **We offer training to raise awareness of the critical role of fire doors**, drawing attention to specific issues such as poor installation and maintenance.
- **To encourage building owners and users to check the operation and condition of their fire doors** and to report those that aren't satisfactory.
- To encourage building owners and users to **take fire safety seriously** including passive fire protection
- To **engage and educate** people, helping the whole building industry and every property owner to understand the correct specification, supply, installation, operation, inspection and maintenance of fire doors.
